AgriEdge Or Mange Ltd – Salesforce-Driven Order Management Solution

Bringing Agri-Input Sales Together on One Salesforce Order Management Platform

User story :

AgriEdge Or Mange Ltd is an agri-input company that supplies seeds, fertilizers, crop-protection chemicals and farm equipment to farmers by way of dealers and agri-retail outlets. The AgriEdge Order Management System (AgriEdge OMS) is a Salesforce application on which sales representatives, sales managers, warehouse managers, administrators and dealers handle the complete order lifecycle in one connected place. As a sales representative, I want to register customers, check products with their latest prices and stock, and create orders containing several products from a single screen, so that I can answer a farmer immediately rather than depending on paper forms and phone calls. As a sales manager, I want high-value orders to be routed to me for approval once the system has verified stock, quantities and customer details, so that I can approve or reject them quickly and with confidence. As a warehouse manager, I want an up-to-date list of approved orders to pick and ship, with stock levels reducing automatically afterwards, so that inventory figures can be relied upon and no delivery is missed. As an administrator, I want customer, product, pricing and user data maintained centrally, so that company information is always accurate and up to date. I also want dashboards and reports on orders, revenue, product demand, stock position and pending approvals, so that sales, purchasing and logistics decisions are based on real data.

1. INTRODUCTION

1.1 Project Overview :

AgriEdge OMS provides AgriEdge Or Mange Ltd with a single Salesforce application in which customer, product, inventory and order data are stored side by side, making information easy to locate, processes consistent and reports dependable. Sales teams rely on it for registering customers, entering orders, checking prices and following up, while managers and warehouse staff can see order status, stock availability and delivery progress at a glance. Automatic order totals, stock updates, task creation, validation checks and approvals ensure that every order is recorded accurately and handled the same way each time.

Through Salesforce Flows, Approval Processes, Validation Rules, Reports and Dashboards, every stage of the order journey, from customer registration and order placement to approval, dispatch and delivery, follows a controlled and repeatable path. Validation Rules prevent records from being saved when quantities are zero or negative, products are out of stock, delivery dates have already passed or required details are missing. Flows handle the routine tasks, such as calculating each order total, reducing stock, sending confirmations and creating dispatch tasks.

1.2 Purpose:

The purpose of AgriEdge OMS is to move away from scattered, manual order handling and towards a scalable, automated and secure Salesforce solution that makes agri-product sales quicker, more precise and more transparent. Specifically, the system offers:

- **One home for customer and product data:** Customer profiles, product details, stock levels and order history are kept together, which reduces duplicate records and data-entry errors.
- **A structured order workflow:** Every order passes through fixed stages (creation, approval, dispatch and delivery), so no order is lost or left waiting without anyone noticing.
- **Automatic approvals and validations:** Approval Processes and Validation Rules check stock, quantities, discounts and mandatory fields on their own, which removes most of the manual verification.
- **Transparent reporting and control:** Reports and Dashboards give managers an up-to-date view of order volume, revenue, stock levels and pending approvals whenever they need it.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 Sales Representative	Record customer orders and track them without delay	Order details are scattered across registers, phone calls and spreadsheets	Work is done by hand and the tools do not talk to each other	Frustrated and likely to make errors
PS-2 Sales Manager	Review and approve orders while keeping an eye on revenue	Approvals are slow and the sales numbers often turn out to be incorrect	No single platform exists to hold all the data	Hesitant when taking decisions
PS-3 Warehouse Manager	Know which orders need to be packed and how much stock is left	I receive order lists and stock figures too late	Updates to orders and stock are communicated manually	Caught off guard and uninformed
PS-4 Customer / Dealer	Place an order and follow its progress	I have no way of knowing whether my order is confirmed, packed or dispatched	There is no automatic tracking or notification system	Anxious and left in the dark

2.2 Empathy Map Canvas

User Persona: Sales Representative

- **Think & Feel:** Worried about quoting the wrong price, selling products that are not in stock and misplacing orders. Feels pressure to maintain accurate records while attending to many farmers and dealers.

- **Hear:** Customers grumbling about delayed confirmations, and managers asking which approvals are still pending and what the day's sales total is.
- **See:** Stacks of registers, scribbled notes and spreadsheets, but no single place that shows where orders or stock stand.
- **Say & Do:** Rechecks stock repeatedly, follows up with the warehouse and managers over the phone, and edits records by hand.

2.3 Brainstorming & Idea Prioritization

Step 1: Brainstormed Ideas

- **Spreadsheet automation:** Use macros and shared workbooks to make customer, product and order data more consistent.
- **Standalone ordering portal:** Build a custom web application that allows dealers to place orders online.
- **ERP extension:** Extend the company's existing ERP system with order and inventory modules.
- **Salesforce-based order system:** Build one cloud application using custom objects, Flows, Approval Processes, Validation Rules, Reports and Dashboards.
- **Automated notifications:** Send automatic emails to customers and managers whenever an order is approved, rejected or shipped.
- **Real-time dashboards:** Give managers live views of order volume, revenue, stock and the approvals waiting for action.

Step 2: Grouping

Group	Ideas	Description
Manual solutions	Spreadsheet automation	Inexpensive and quick to start, but it still depends on manual updates and allows duplicate entries
Semi-automated solutions	Standalone ordering portal, ERP extension	Automate part of the process but typically need separate systems, heavy customization or complex integration
Fully automated cloud solutions	Salesforce-based order system, automated notifications, real-time dashboards	Automate ordering, approvals, validations, stock updates and reporting end to end on a single scalable platform

Step 3: Idea Prioritization

Each idea is scored High, Medium or Low against the criteria listed below.

Idea	Impact	Feasibility	Cost Efficiency
Spreadsheet automation	Low	High	High
Standalone ordering portal	Medium	Medium	Low
ERP extension	Medium	Low	Low

Idea	Impact	Feasibility	Cost Efficiency
Salesforce-based order system	High	High	High
Automated notifications	High	High	High
Real-time dashboards	High	Medium	High

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

The journey map follows a customer and the company's staff through the order process, from the first contact to delivery and follow-up.

Stage 1: Awareness & Registration

- **User Actions:** Learns about the company's products and registers as a customer or dealer.
- **Touchpoints:** Company website, sales representative, helpline.
- **Pain Points:** Details are entered manually and customer records end up duplicated.
- **AgriEdge OMS Solution:** The customer is created as a Salesforce record, and validation rules block duplicate or incomplete entries.
- **Emotion:** Curious and hopeful.

Stage 2: Product Selection

- **User Actions:** Browses seeds, fertilizers and equipment and checks their prices and availability.
- **Touchpoints:** Product catalogue, sales representative.
- **Pain Points:** Price lists are outdated and it is not clear what is in stock.
- **AgriEdge OMS Solution:** A central Product object shows the category, unit price and current stock quantity.
- **Emotion:** Interested but unsure.

Stage 3: Order Request

- **User Actions:** Requests the selected products in the quantities needed.
- **Touchpoints:** Order form, phone call, email.
- **Pain Points:** Paper registers, misplaced orders and wrong quantities.
- **AgriEdge OMS Solution:** Each request is saved as an Order record with its Order Items, and validation rules refuse invalid quantities and out-of-stock products.
- **Emotion:** Anxious.

Stage 4: Payment

- **User Actions:** Pays in advance or in full and shares the payment proof.
- **Touchpoints:** Accounts desk, online payment, sales representative.
- **Pain Points:** Payments are recorded by hand and confirmation takes time.
- **AgriEdge OMS Solution:** The Payment Status field on the order is updated automatically.
- **Emotion:** Cautious.

Stage 5: Approval

- **User Actions:** Waits while a high-value order is reviewed and approved.
- **Touchpoints:** Sales representative, sales manager.
- **Pain Points:** Approvals stall and nobody can tell where the order currently is.
- **AgriEdge OMS Solution:** An Approval Process routes the order to the sales manager and sends out automatic notifications.
- **Emotion:** Impatient and uncertain.

Stage 6: Dispatch & Delivery

- **User Actions:** Receives an order confirmation while the warehouse packs and ships the goods.
- **Touchpoints:** Warehouse manager, delivery partner.
- **Pain Points:** Stock is adjusted manually and dispatch information comes late.
- **AgriEdge OMS Solution:** A Flow deducts the stock, advances the order to its next status and creates a dispatch task.
- **Emotion:** Relieved.

Stage 7: Reporting & Follow-up

- **User Actions:** Receives the goods and gives feedback while management reviews the results.
- **Touchpoints:** Dashboards, reports, sales representative.
- **Pain Points:** Reporting is slow and cannot be trusted.
- **AgriEdge OMS Solution:** Reports and Dashboards track order volume, revenue, stock and pending approvals.
- **Emotion:** Satisfied and confident.

3.2 Solution Requirements

Functional Requirements

FR-1: Customer Management

- **Description:** Manage customer records.

- **Details:** Create, update and view customer profiles containing contact details, location, customer type (Farmer, Dealer, Retailer) and order history. Validation rules prevent duplicate and incomplete records from being saved.

FR-2: Product & Inventory Management

- **Description:** Create products and keep their stock up to date.
- **Details:** Capture the product name, category, unit price, stock quantity and status. Stock is reduced automatically once orders are approved and dispatched.

FR-3: Order Processing

- **Description:** Create, approve and reject orders.
- **Details:** Sales representatives create orders with multiple order items, and high-value orders pass through an Approval Process. Validation rules refuse invalid quantities, out-of-stock items and past delivery dates, and notifications keep everyone involved informed.

FR-4: Order Fulfilment Automation

- **Description:** Automate totals, stock reduction and dispatch.
- **Details:** A Flow calculates the order total, deducts stock once an order is approved and generates dispatch tasks for the warehouse team.

FR-5: Reporting

- **Description:** Reports and dashboards.
- **Details:** Track order volume, revenue, product demand, stock levels and pending approvals as they change.

Non-Functional Requirements

NFR-1: Security

- **Description:** Protect customer and order data.
- **Details:** Profiles, roles and permission sets restrict every user to the information needed for their job.

NFR-2: Usability

- **Description:** A simple and consistent user experience.
- **Details:** Clean Lightning App pages, page layouts and record views that sales and warehouse staff can learn with minimal training.

NFR-3: Performance

- **Description:** Fast processing of order transactions.
- **Details:** Records, approvals and reports load quickly, even in the busy sowing and harvest seasons.

NFR-4: Scalability

- **Description:** Support growth in customers and products.
- **Details:** The cloud platform handles larger data volumes and more users without any need for redesign.

NFR-5: Reliability and Availability

- **Description:** Dependable access to the system.
- **Details:** The Salesforce cloud platform provides high uptime along with automatic data backups.

NFR-6: Data Accuracy

- **Description:** Accurate and consistent data.
- **Details:** Validation rules, required fields and automation reduce the likelihood of manual mistakes.

3.3 Data Flow Diagram

The Level-1 data flow diagram below illustrates the main processes in the system.

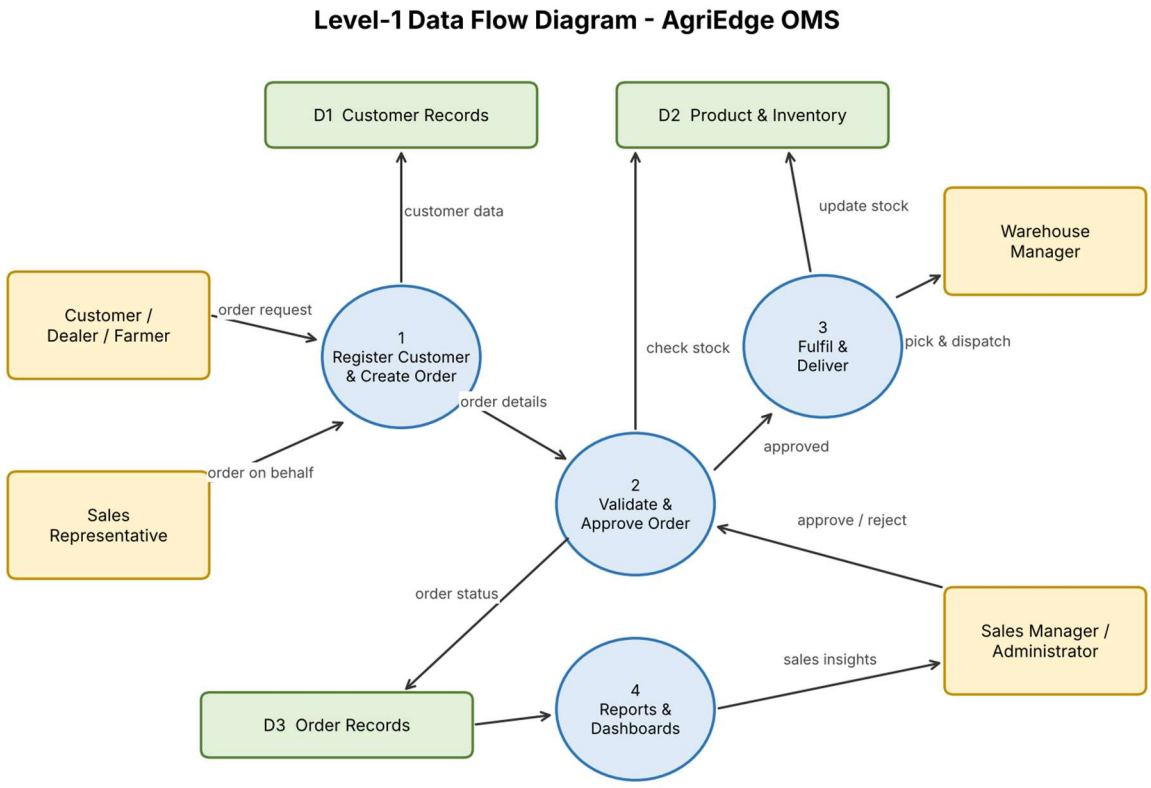

Figure 3.1: Level-1 Data Flow Diagram – AgriEdge OMS

The diagram corresponds to the following steps:

- **Step 1, input:** The customer, or a sales representative on their behalf, submits customer and order details to process 1.
- **Step 2, validation and storage:** Process 1 validates the data and saves it in D1 (customer records). Process 2 checks the stock available in D2 and stores the order status in D3.
- **Step 3, approval routing:** Process 2 sends each high-value order to the sales manager, receives the approve or reject decision and then updates the order status in D3.
- **Fulfilment:** Process 3 takes the approved orders, hands the pick list to the warehouse manager and updates the stock in D2.
- **Step 4, reports and dashboards:** Process 4 reads the processed order data from D3 and produces the reports and dashboards.

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

AgriEdge OMS addresses disconnected order workflows by pairing the way users work, and the limits they face, with native Salesforce automation features.

Problem Statement

Agri-input companies such as AgriEdge Or Mange Ltd often manage customer registration, order entry, approvals and stock through separate registers, phone calls and spreadsheets. This leads to duplicate records, incorrect stock figures, delayed confirmations and no combined view of sales. Sales staff spend time on manual checks, managers lack visibility, and customers are left waiting for updates on their orders.

Problem–Solution Mapping

Problem (User Behavior / Constraint)	AgriEdge OMS Solution	Salesforce-Native Capability
Customer and order details kept in registers and loose notes	A central set of customer, product and order records	Custom objects (Customer, Product, Order, Order Item) connected through relationships
Incorrect or incomplete data entered into records	Data checked at the moment it is entered	Validation rules and required fields
Duplicate customers, or orders raised for products that are not in stock	Duplicates and invalid orders blocked automatically	Duplicate rules and validation logic
Slow approvals that are handled manually	Orders routed to the right approver, who approves or rejects with one click	Approval Processes and Flow automation
Totals calculated and stock adjusted by hand	Totals and stock levels updated automatically	Record-triggered Flows and roll-up summary fields
Sensitive records exposed to the wrong people	Every user sees only what their role permits	Profiles, permission sets, roles and sharing rules

Problem (User Behavior / Constraint)	AgriEdge OMS Solution	Salesforce-Native Capability
No visibility of order progress	Live status tracking and management reports	Reports and Dashboards
Different types of users have different needs	Interfaces designed for sales, warehouse and admin users	Lightning App pages and Lightning record pages

4.2 Proposed Solution

Parameter	Description
Problem	Orders managed manually through registers, phone calls and spreadsheets, resulting in duplicate records, stock errors, slow approvals and unclear order status.
Solution	AgriEdge OMS built on Salesforce, bringing customer registration, order creation, approvals, stock updates and reporting together on one platform.
Novelty	End-to-end automation of validation, approval routing, total calculation and stock updates using only native Salesforce tools (Flows, Approval Processes, Lightning).
Social Impact	Farmers and dealers receive faster service, dependable order status and on-time delivery of seeds and fertilizers, helping them plan their cultivation better.
Revenue Model	Deployment for organizations through licensing, implementation and support services offered to agri-input companies and distributors.
Scalability	Supports multiple regions; new products, dealers and users can be added without redesigning the system.

4.3 Solution Architecture

The architecture combines Salesforce objects, automation flows, approval processes, dashboards and security layers. Users interact through the Lightning interface, automation processes their requests, and the results are stored in custom objects, while a security layer governs access at every point.

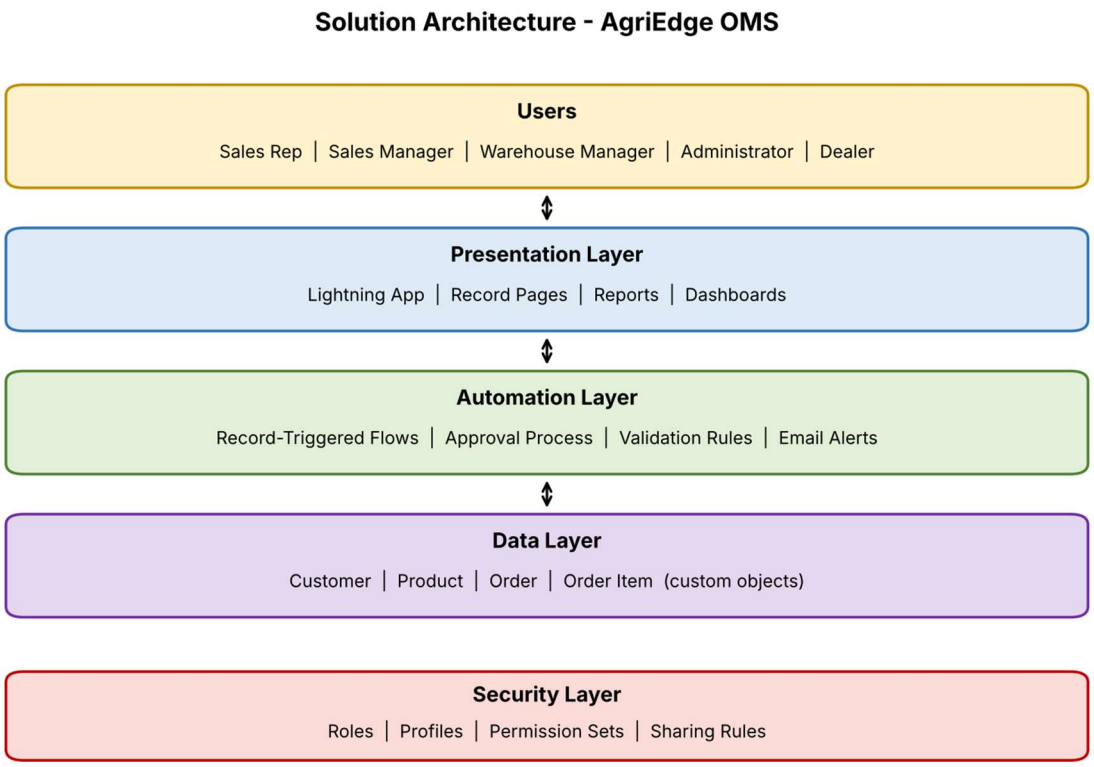

Figure 4.1: Solution Architecture – AgriEdge OMS

The layers cooperate in the following way:

- **Users:** Sales representatives, sales managers, warehouse managers, administrators and dealers each get a view matched to their role.
- **Presentation layer:** The Lightning app, record pages, reports and dashboards form a simple and easy-to-use interface.
- **Automation layer:** Flows, approval processes, validation rules and email alerts carry out the checks, routing and stock updates.
- **Data layer:** The Customer, Product, Order and Order Item objects hold all the records and the relationships between them.
- **Security layer:** Roles, profiles, permission sets and sharing rules apply across all layers, so users can access only the records they are authorized to see.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project follows the Agile methodology. Work is divided into Epics → User Stories → Story Points and delivered one sprint at a time, and the velocity of completed sprints is used to estimate the remaining work.

Product Backlog and Sprint Schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to create a Salesforce developer account so that I can develop and deploy the AgriEdge order management system.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to build custom objects for Customer, Product, Order and Order Item so that business data is stored and managed efficiently.	3	High	Member2
Sprint-2	Data Modeling	USN-3	As a user, I want a separate tab for each object so that I can switch easily between customers, products, orders and order items.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As an admin, I want to add relevant fields such as customer details, product price, stock and order status so that records hold complete and accurate information.	5	High	Member4
Sprint-2	Data Modeling	USN-5	As a sales representative, I want a single Lightning App so that I can access all order functions from one interface.	3	High	Member4
Sprint-2	Data Modeling	USN-6	As an admin, I want to define relationships between customers, orders, order items and products so that the system can link and trace sales activity.	5	Medium	Member1
Sprint-2	Data Modeling	USN-7	As a user, I want customized page layouts that display only the relevant information so that data entry is clearer and simpler.	5	High	Member2
Sprint-3	Automation	USN-8	As a system, I want to validate inputs such as mandatory fields, quantities and stock availability so that incorrect or incomplete records cannot be saved.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows to calculate totals, update stock and send notifications so that manual effort is reduced and processing is faster.	3	High	Member4
Sprint-3	Automation	USN-10	As a sales manager, I want an approval process for high-value orders so that they are reviewed before they are confirmed.	5	High	Member1
Sprint-4	Security	USN-11	As an admin, I want to configure role-based security so that users can access only the data relevant to their responsibilities.	5	High	Member2
Sprint-5	Reports	USN-12	As a manager, I want reports on orders, product demand and stock levels so that I can monitor sales operations.	4	High	Member3
Sprint-6	Dashboards	USN-13	As a manager, I want visual dashboards showing order statistics and trends so that I can judge business performance at a glance.	4	Medium	Member4

Epic Summary

Epic	Stories	Story Points
Developer Setup	USN-1	1
Data Modeling	USN-2 to USN-7	24
Automation	USN-8 to USN-10	11
Security	USN-11	5
Reports	USN-12	4
Dashboards	USN-13	4
Total	13 stories	49

Sprint Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date
Sprint-1	4	7 days	5 Oct 2026	11 Oct 2026	4	11 Oct 2026
Sprint-2	21	7 days	12 Oct 2026	18 Oct 2026	21	18 Oct 2026
Sprint-3	11	7 days	19 Oct 2026	25 Oct 2026	11	25 Oct 2026
Sprint-4	5	7 days	26 Oct 2026	1 Nov 2026	5	1 Nov 2026
Sprint-5	4	7 days	2 Nov 2026	8 Nov 2026	4	8 Nov 2026
Sprint-6	4	7 days	9 Nov 2026	15 Nov 2026	4	15 Nov 2026
Total	49	42 days			49	

Team Workload

Member	Stories	Total Story Points
Member1	USN-1, USN-6, USN-10	11
Member2	USN-2, USN-7, USN-11	13
Member3	USN-3, USN-12	7
Member4	USN-4, USN-5, USN-8, USN-9, USN-13	18

6. Project Development Phase

Milestone 1: Salesforce Developer Account Creation

Definition: A free Salesforce Developer Edition org is the workspace in which the entire AgriEdge OMS is built, tested and demonstrated, offering full access to the platform without touching any live production system.

Key steps:

- Sign up at developer.salesforce.com/signup
- Verify the email address and set a password
- Log in and open Setup

Screenshots:

Milestone 2: Custom Object Creation (Customer, Product, Order, Order Item)

Definition: A custom object is the Salesforce equivalent of a database table. Four objects store the core business data: Customer (farmer, dealer or retailer), Product (seeds, fertilizers, equipment), Order (the sales order) and Order Item (a line that links an order to a product, along with quantity and price).

Key steps:

- Setup > Object Manager > Create > Custom Object
- Enter the label, plural label and record name (choose Auto Number for Order and Order Item)
- Tick Allow Reports, Allow Search and Launch New Custom Tab Wizard

Screenshots:

Milestone 3: Tabs Creation

Definition: A tab is a navigation shortcut that opens the records of an object. Separate tabs allow users to move quickly between customers, products, orders and order items.

Key steps:

- Setup > Tabs > Custom Object Tabs > New
- Choose the object and a tab style
- Set the profile visibility and add the tab to the relevant apps

Screenshots:

Milestone 4: Lightning App Creation

Definition: A Lightning App groups tabs and utilities into one branded workspace. The AgriEdge OMS app gives sales teams a single interface for all order-related work.

Key steps:

- Setup > App Manager > New Lightning App
- Provide the app name, branding and navigation style
- Add the four object tabs together with Reports and Dashboards
- Assign the app to the required user profiles

Screenshots:

Milestone 5: Fields Creation

Definition: Fields are the columns of an object, each holding one piece of data, and together they capture customer details, product information and order status accurately.

Key steps:

- Object Manager > (object) > Fields & Relationships > New
- Choose the data type (Text, Email, Phone, Date, Currency, Number, Picklist)
- Type the field name, make it required where necessary, and define the picklist values for Order Status such as Draft, Submitted, Approved, Rejected, Dispatched and Delivered
- Configure field-level security and add the field to the page layouts

Screenshots:

Milestone 6: Create Relationships

Definition: Relationships link records belonging to different objects. A Lookup field connects Order to Customer, a Master-Detail field connects Order Item to Order, and a Lookup field connects Order Item to Product, enabling roll-up totals and activity tracking.

Key steps:

- Create a Lookup field on Order that references Customer
- Create a Master-Detail field on Order Item that references Order
- Create a Lookup field on Order Item that references Product
- Create a roll-up summary field on Order that totals the Order Item line amounts
- Check that the related lists are displayed on the parent records

Screenshots:

Milestone 7: Page Layout Customization

Definition: A page layout controls which fields, sections and related lists appear on a record page. Customizing it gives cleaner screens and simpler data entry.

Key steps:

- Object Manager > (object) > Page Layouts
- Group fields into logical sections and mark the key fields as required
- Add related lists and action buttons
- Assign the layouts to the relevant profiles

Screenshots:

Milestone 8: Validation Rules

Definition: A validation rule is a formula that stops a record from being saved when its data is wrong or incomplete, for example a missing mandatory field, a zero or negative quantity, a delivery date in the past, or an ordered quantity greater than the available stock.

Key steps:

- Object Manager > (object) > Validation Rules > New
- Write the error condition formula, for example Quantity__c <= 0 on Order Item and Delivery_Date__c < TODAY() on Order
- Enter the error message and choose where it should appear
- Activate the rule and test it using invalid data

Screenshots:

Milestone 9: Flows (Automation)

Definition: Flow is Salesforce's declarative automation tool. Record-triggered flows calculate order totals, send confirmation notifications, deduct stock and create dispatch tasks with no manual effort.

Key steps:

- Setup > Flows > New Flow > Record-Triggered Flow
- Choose the object (Order or Order Item) and the trigger condition
- Include decision, update, create-task and email-alert elements
- Save the flow, activate it and test it

Screenshots:

Milestone 10: Approval Process

Definition: An approval process routes a record to the right approver, who can approve or reject it in a single click. The Sales Manager reviews high-value orders before they are confirmed.

Key steps:

- Setup > Approval Processes > Order > Create New
- Set the entry criteria (for example Total Amount above the defined limit) and the approver (user, role or queue)
- Define the approval and rejection actions, such as updating the Order Status
- Activate the process

Screenshots:

Milestone 11: Reports

Definition: Reports are saved queries that list records based on chosen criteria and grouping. Managers use them to monitor orders, product demand and stock levels.

Key steps:

- Reports > New Report
- Select a report type such as Orders with Order Items and Products
- Add filters, groupings and columns
- Store the report in a folder

Screenshots:

Milestone 12: Dashboards

Definition: Dashboards display report data as charts, gauges and tables, giving managers a live view of order statistics and trends.

Key steps:

- Dashboards > New Dashboard
- Add components that are based on saved reports
- Pick the chart types and give each component a title
- Save the dashboard and select the running user

Screenshots:

Milestone 13: Security Setup

Definition: Security decides who can see and change which data. Roles, profiles, permission sets and sharing rules ensure that users access only the data connected with their duties.

Key steps:

- Create the roles (Admin, Sales Manager, Sales Representative, Warehouse Manager) in the role hierarchy
- Set up profiles and permission sets for object-level and field-level access
- Specify the organization-wide defaults and sharing rules
- Check the configuration using Login As

Screenshots:

Milestone 14: Conclusion

Project Summary

AgriEdge OMS, the Salesforce-based order management system built for AgriEdge Or Mange Ltd, replaces the registers, phone calls and spreadsheets that earlier held the order process together. Customer registration, order entry, approvals, stock updates and reporting are now handled on a single Salesforce platform, giving everyone one reliable source of truth.

Outcomes and Benefits

- **Efficiency:** Much less manual data entry, approval follow-up and stock reconciliation.
- **Accuracy:** Validation reduces duplicate, missing and inconsistent records.
- **Speed:** Automatic totals, approvals and stock updates shorten the time taken to process an order.
- **Transparency:** Stakeholders view live status on dashboards instead of asking colleagues.
- **Accountability:** Every record, approval and change can be traced inside one system.
- **Scalability and maintainability:** Because it is built on standard Salesforce features rather than extensive custom code, new products and regions can be added through configuration, and administrators can maintain it without specialist developers.

Possible Future Enhancements

- **Dealer portal:** for example an Experience Cloud site that offers self-service ordering, status tracking and invoice downloads
- **Mobile access:** through the Salesforce mobile app, for field sales staff who visit farms
- **Automated reminders:** email or SMS alerts for payment dues, dispatch updates and repeat orders each season
- **Advanced analytics:** for example seasonal and regional demand forecasting and stock planning
- **Integrations:** with an ERP, a payment gateway, logistics tracking, or weather and crop-advisory services
- **Apex-based customization:** for complex pricing, discount and bulk-order logic
- **Expansion:** to additional product lines, warehouses and regions on the same framework

AgriEdge OMS achieves its key goals: one platform, cleaner data, faster approvals, automatic stock updates and live reporting. Its configuration-first, native design gives the organization a solid foundation for future growth.
